

Warm-Up

Linear vs. Nonlinear Functions

Lesson Question

Lesson Goals

Use graphs and tables to determine whether a function has a constant rate of change.

Identify functions.

Identify functions.

Words to Know

Write the letter of the definition next to the matching word as you work through the lesson. You may use the glossary to help you.

_____ display

A. to explain in understandable terms; to understand according to personal beliefs

_____ rate of change

B. a function that can be written in the form $y = mx + b$, where m and b are real numbers; consists of a set of ordered pairs all lying on the same line

_____ linear function

C. in a function, the ratio of the change in the dependent value with respect to the change in the independent value

_____ interpret

D. to put in view or make evident

Instruction

Linear vs. Nonlinear Functions

Slide

2

Finding the Rate of Change

The **rate of change** is the change in one quantity with respect to another quantity.

Use the table to **interpret** the rate of change.

Change in input - 2 = 1

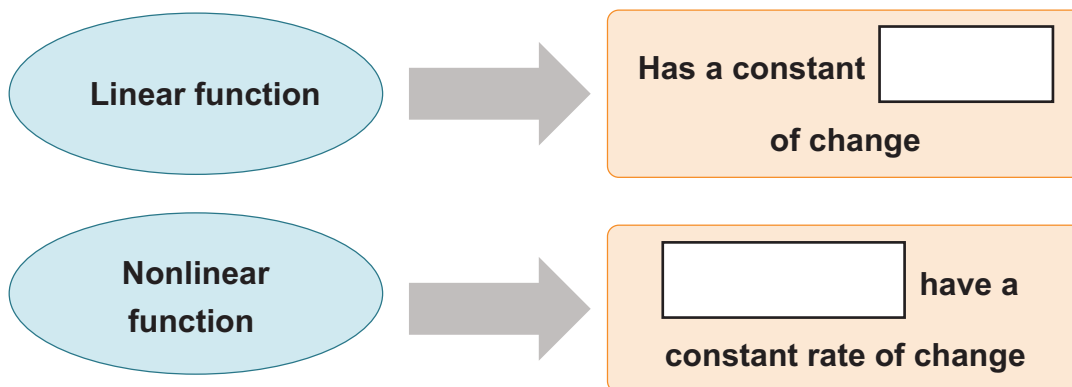

Change in output $165 - 110 = 55$

Rate of change = $\frac{55}{1} =$

x	y
2	110
3	165
4	220
5	275

Slide

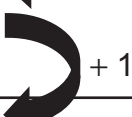

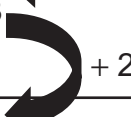

4

Recognizing Rate of Change from Tables

EXAMPLE

This table **displays** the approximate height and distance traveled by a soccer ball that was kicked across a field.

Write whether each column represents a function that is nonlinear or linear.

Time (s)	Height (yd)	Length (yd)
0 	0 	0 
1 	5.3 	17 
2 	8 	34 
3	9.8	51

Instruction

Linear vs. Nonlinear Functions

Slide

7

Rate of Change from a Graph

EXAMPLE

This shows the length and height traveled by a soccer ball.

Time (s)	Height (yd)	Length (yd)
0	0	0
1	5.3	17
2	8	34
3	9.8	51
4	7.7	68

So since we have a rate of change, that tells us that this graph shows a linear function.

Instruction

Linear vs. Nonlinear Functions

Slide

10

Finding the Rate of Change from a Graph

EXAMPLE

This shows the length and height traveled by a soccer ball.

Time (s)	Height (yd)	Length (yd)
0	0	0
1	5.3	17
2	8	34
3	9.8	51
4	7.7	68

Since these rates are constant,

this is considered a function.

Slide

12

Linear and Nonlinear Functions in Real-World Situations

REAL-WORLD CONNECTION

There are 24 hours in one day. The total hours is a function of the days. Does this situation represent a linear or nonlinear function?

Complete the table.

Days	Hours
1	
2	
3	
4	

There is a rate of change. This confirms a relationship or function between days and hours.

Summary

Linear vs. Nonlinear Functions

Lesson Question

What is the difference between linear and nonlinear functions?

Answer

Use this space to write any questions or thoughts about this lesson.
