

# Warm-Up

## Solving with the Distributive Property

### Lesson Question

### Lesson Goals

**Apply** the distributive property to solve one-variable  equations.

**Verify** and **explain** the steps in this process.

**Use** the  property to solve real-world problems.

### Words to Know

*Write the letter of the definition next to the matching word as you work through the lesson. You may use the glossary to help you.*

\_\_\_ verify

A. the rules that allow you to balance, manipulate, and solve equations

\_\_\_ evaluate

B. the property stating that the product of a factor times a given quantity containing a sum or difference is equal to the sum of the products of that factor times each addend within the quantity

\_\_\_ properties of equality

C. to determine the value of

\_\_\_ distributive property

D. to apply what is known to confirm an expected result

2

### How to Solve an Equation Using the Distributive Property

#### PROCEDURE

1. Use the  **property** to remove parentheses.
2. Use the subtraction or addition **property of equality** to isolate the  term.
3. Use the multiplication or  **property of equality** to isolate the variable.

$$\begin{aligned}
 & -6(2x - 5) = 6 \\
 & -6(2x) - (-6)(\text{input}) = 6 \\
 & -12x - (-30) = 6 \\
 & -12x + 30 = 6 \\
 & \quad -30 \quad -30 \\
 & \frac{-12x}{-12} = \frac{-24}{-12} \\
 & x = \text{input}
 \end{aligned}$$

5

### Identifying the Steps

Use the steps to solve the equation. Determine which properties justified each step.

$$\begin{aligned}
 & \text{input} \\
 & 4(3x - 5) = -50
 \end{aligned}$$

Step 1:  - 20 = -50

Distributive property

Step 2:  $12x = \text{input}$

the variable term by adding 20 to both sides.

Step 3:  $x = -2.5$

property of equality  
Divide both sides by 12.  
Division property of equality

7

## Verifying a Solution

## EXAMPLE

Look at the steps and at the solution.

$$10(a - 4) = 90$$

$$10a - \boxed{\phantom{00}} = 90 \quad \text{Distributive property}$$

$$\quad + 40 \quad + 40 \quad \text{Inverse property of } \boxed{\phantom{00}}$$

$$\frac{10a}{10} = \frac{130}{10} \quad \text{Inverse property of } \boxed{\phantom{00}}$$

$$a = \boxed{\phantom{00}}$$

Verify the answer using  $\boxed{\phantom{00}}$ .

$$10(a - 4) = 90$$

$$10(13 - 4) = 90$$

$$10(9) = 90$$

$$\boxed{\phantom{00}} = 90$$

It's a balanced equation, so we know our solution is correct.

**Representing a Real-World Scenario****REAL-WORLD CONNECTION**

Janice is building a fence around a rectangular garden in her backyard. The area of the garden will be 240 square feet. The width of the garden is  $x$  feet shorter than its length, which is 20 feet. How many feet of fencing does Janice need?

Draw a picture:

Write an equation:

$$A = \boxed{\phantom{000}}$$

$$240 = \boxed{\phantom{000}} (20 - x)$$

The above equation models the situation given in the word problem.

Slide

12

## Solving a Real-World Linear Equation

## EXAMPLE

Janice's Rectangular Garden

$$A = \boxed{\phantom{000}}$$

$$240 = 20(20 - x)$$

Simplify and solve the equation.

$$240 = 20(20) - \boxed{\phantom{000}}$$

$$240 = 400 - 20x$$

$$-400 \quad -400$$

$$\frac{-160}{-20} = \frac{-20x}{\boxed{\phantom{000}}}$$

$$8 = x$$

$$x = 8$$

**Evaluate** to find the width of the garden.

$$20 - \boxed{\phantom{00}} = 12 \text{ ft}$$

So the width of our garden is  $\boxed{\phantom{00}}$  feet.

Slide

14

## Verifying the Real-World Scenario

Janice's Rectangular Garden

$$A = lw$$

$$240 = 20(20 - x)$$

$$240 = 20(20 - \boxed{\phantom{00}})$$

 $x = 8$ ; width = 12 ft; length = 20 ft

$$240 = \boxed{\phantom{00}} \cdot 12$$

$$240 = 240$$

The other way to verify it is just multiply out the length and width of the rectangle.

$$240 = \boxed{\phantom{00}} \cdot 20$$

$$240 = 240$$

How much fencing does Janice need?

$$P = \boxed{\phantom{00}} + 2w$$

$$P = 2(20) + 2(12)$$

$$= 40 + 24$$

$$= 64 \text{ ft}$$

Janice needs to go and buy  $\boxed{\phantom{00}}$  feet of fencing.

# Summary

## Solving with the Distributive Property

### Lesson Question

How do you solve linear equations using the distributive property?

### Answer

*Use this space to write any questions or thoughts about this lesson.*
